1 Multidimensional access methods 77%

Volker Gaede , Oliver Günther
ACM Computing Surveys (CSUR) June 1998
Volume 30 Issue 2

Search operations in databases require special support at the physical level. This is true for conventional databases as well as spatial databases, where typical search operations include the point query (find all objects that contain a given search point) and the region query (find all objects that overlap a given search region). More than ten years of spatial database research have resulted in a great variety of multidimensional access methods to support ...
